

## Electromechanical Assembly

PMI has provided electro-mechanical and complete box build assembly services since 1995. We have dedicated customer specific cells for performing final product assembly which includes the assembly and integration of chassis, power supplies, cables, PCBs along with system configuration, functional test, and burn-in services.

This service allows PMI to customize assembly programs for specific customer requirements from board assembly to complete turnkey dock-to-stock programs.

A sampling of some current box build assemblies include pneumatic banking equipment, blower assemblies, video equipment, optical transmission, medical equipment, high voltage rectifier assemblies, audio equipment, telecommunication devices, custom power supplies and industrial and military products.
